The screenshot shows a web page titled "AP Statistics Curriculum 2007 Bayesian Prelim". It features a navigation sidebar on the left with links like "Main Page", "Community portal", and "Recent changes". The main content area includes a "Contents" table of contents, an "Introduction" section explaining Bayes Theorem with the formula $P(A|B) = \frac{P(B|A) \cdot P(A)}{P(B)}$, and an "Example" section with a probability problem and its solution. The solution involves calculating $P(D|T)$ using Bayes' theorem, resulting in 0.3231293.

Probability and Statistics Ebook - Bayes Theorem

Introduction

Bayes Theorem, or "Bayes Rule" can be stated succinctly by the equality

$$P(A|B) = \frac{P(B|A) \cdot P(A)}{P(B)}$$

In words, "the probability of event A occurring given that event B occurred is equal to the probability of event B occurring given that event A occurred times the probability of event A occurring divided by the probability that event B occurs."

Bayes Theorem can also be written in terms of densities or likelihood functions over continuous random variables. Let's call $f(\cdot)$ the density (or in some cases, the likelihood) defined by the random process x . If X and Y are random variables, we can say

$$f(Y|X) = \frac{f(X|Y) \cdot f(Y)}{f(X)}$$

Example

Suppose a laboratory blood test is used as evidence for a disease. Assume $P(\text{positive Test}|\text{Disease}) = 0.95$, $P(\text{positive Test}|\text{no Disease}) = 0.01$ and $P(\text{Disease}) = 0.005$. Find $P(\text{Disease}|\text{positive Test})$?

Denote D = (the test person has the disease), D^c = (the test person does not have the disease) and T = (the test result is positive). Then

$$P(D|T) = \frac{P(T|D)P(D)}{P(T)} = \frac{P(T|D)P(D)}{P(T|D)P(D) + P(T|D^c)P(D^c)} = \frac{0.95 \times 0.005}{0.95 \times 0.005 + 0.01 \times 0.995} = 0.3231293.$$

Bayesian Statistics

What is commonly called Bayesian Statistics is a very special application of Bayes Theorem.

Making Sense of Evidence

This section helps students and teachers make effective use of primary sources. "Making Sense of Documents" provide strategies for analyzing online primary materials, with interactive exercises and a guide to traditional and online sources. "Scholars in Action" segments show how scholars puzzle out the meaning of different kinds of primary sources, allowing you to try to make sense of a document yourself then providing audio clips in which leading scholars interpret the document and discuss strategies for overall analysis.

Abstract: New approaches to undergraduate history education rely on primary sources. This study, based on a 2008-2009 online survey of 627 academic historians and 25 follow-up interviews, captures a snapshot of the current use of online, published, and archival primary sources used in new teaching methods. It identifies three distinct ways faculty utilize primary sources—analyzing documents in freshman courses, building research skills in historical methods classes, and doing research in upper division courses. Librarians can

Using Google Docs Forms to Run a Peer-Review Writing Workshop

By Ryan Cordell

Today in my literary theory and writing course I found yet another great use for Google Docs, one of our favorite subjects here at ProfHacker. Specifically, I used Google Docs Forms to structure an in-class peer review workshop.

I've asked my class to submit all of their writing via Google Docs this semester. Google Docs are easier to comment on and return to students. My students and I also don't need to worry about which version of a given document is attached to which email, since we share a online documents rather than exchanging files. Though there have been a few technical hiccups, on the whole, managing a revision-heavy class has been much easier through Google Docs than it ever was via email or CMS.

Boost retention, graduation rates and alumni development with analytics.

SAMR and Assessment

	Where the learner is going	Where the learner is right now	How to get there
Teacher	1 Clarifying learning intentions and criteria for success	2 Engineering effective class-room discussions and other learning tasks that elicit evidence of student understanding	3 Providing feedback that moves learners forward
Peer	Understanding and sharing learning intentions and criteria for success	4 Activating students as instructional resources for one another	
Learner	Understanding learning intentions and criteria for success	5 Activating students as the owners of their own learning	

Black, P. and William D. “Developing the theory of formative assessment.” *Educational Assessment, Evaluation and Accountability*. 21:5-31 (2009)

Substitution: *Sociology Online Discussion Rubric* (Evans, 2010)

	4 Points	2 Point	0 Points
Content	You show that you can apply or extend the idea you are discussing.	Some of your messages analyze, interpret, or apply the material well, but some do not. This might either be because the analysis was not done well, or because it was not attempted (that is, was simply opinion or hearsay).	Your messages generally show little evidence of analysis, consisting instead of opinion, feelings and impressions.
Accuracy	You accurately represent the concepts discussed.	You generally represent the concepts accurately, but you do not do so in all cases.	You have significant issues with regard to accurately representing the concepts.
Use of material	You use and cite sources, including the text and articles and/or bring in an outside source, all of which clearly add <i>significantly</i> to the discussion.	You clearly refer back to a definition, example or concept from the reading or lecture.	You do not bring in or refer to any material from the text, outside sources, or lectures.
Sociological Analysis	You focus on the sociological implications of the issue at hand (e.g., social meaning, the outcomes for society or groups, the social function served).	You touch on some sociological issues, but focus also on individual ones.	You focus primarily on individual issues.
	2 Points	1 Point	0 Points
Responses	You extend or politely question the post of another person in a way that advances the discussion.	You add new examples that continue the idea created by another person.	Your responses are primarily agreement.
Participation	You write at least three or more substantive comments (using the above criteria) based on the discussion assigned.		You write fewer than three substantive comments.
Time of Posting	Your posts are spread widely during the discussion.	You post at two significantly different times.	Your posts are clustered within a short period of time.
Posts Read	You have read at least 75% of the posts in the discussion.	You read at least 50% of the posts in the discussion.	You read less than 50% of the posts in the discussion.
Clarity	You use standard grammar and spelling and your meaning is clear.	Your posts have some grammar or spelling mistakes or your meaning is not entirely clear.	Your posts have significant grammar or spelling mistakes or your meaning is not clear.

Augmentation: *A Branching Rubric for Writing* (Hedrick, 2010)

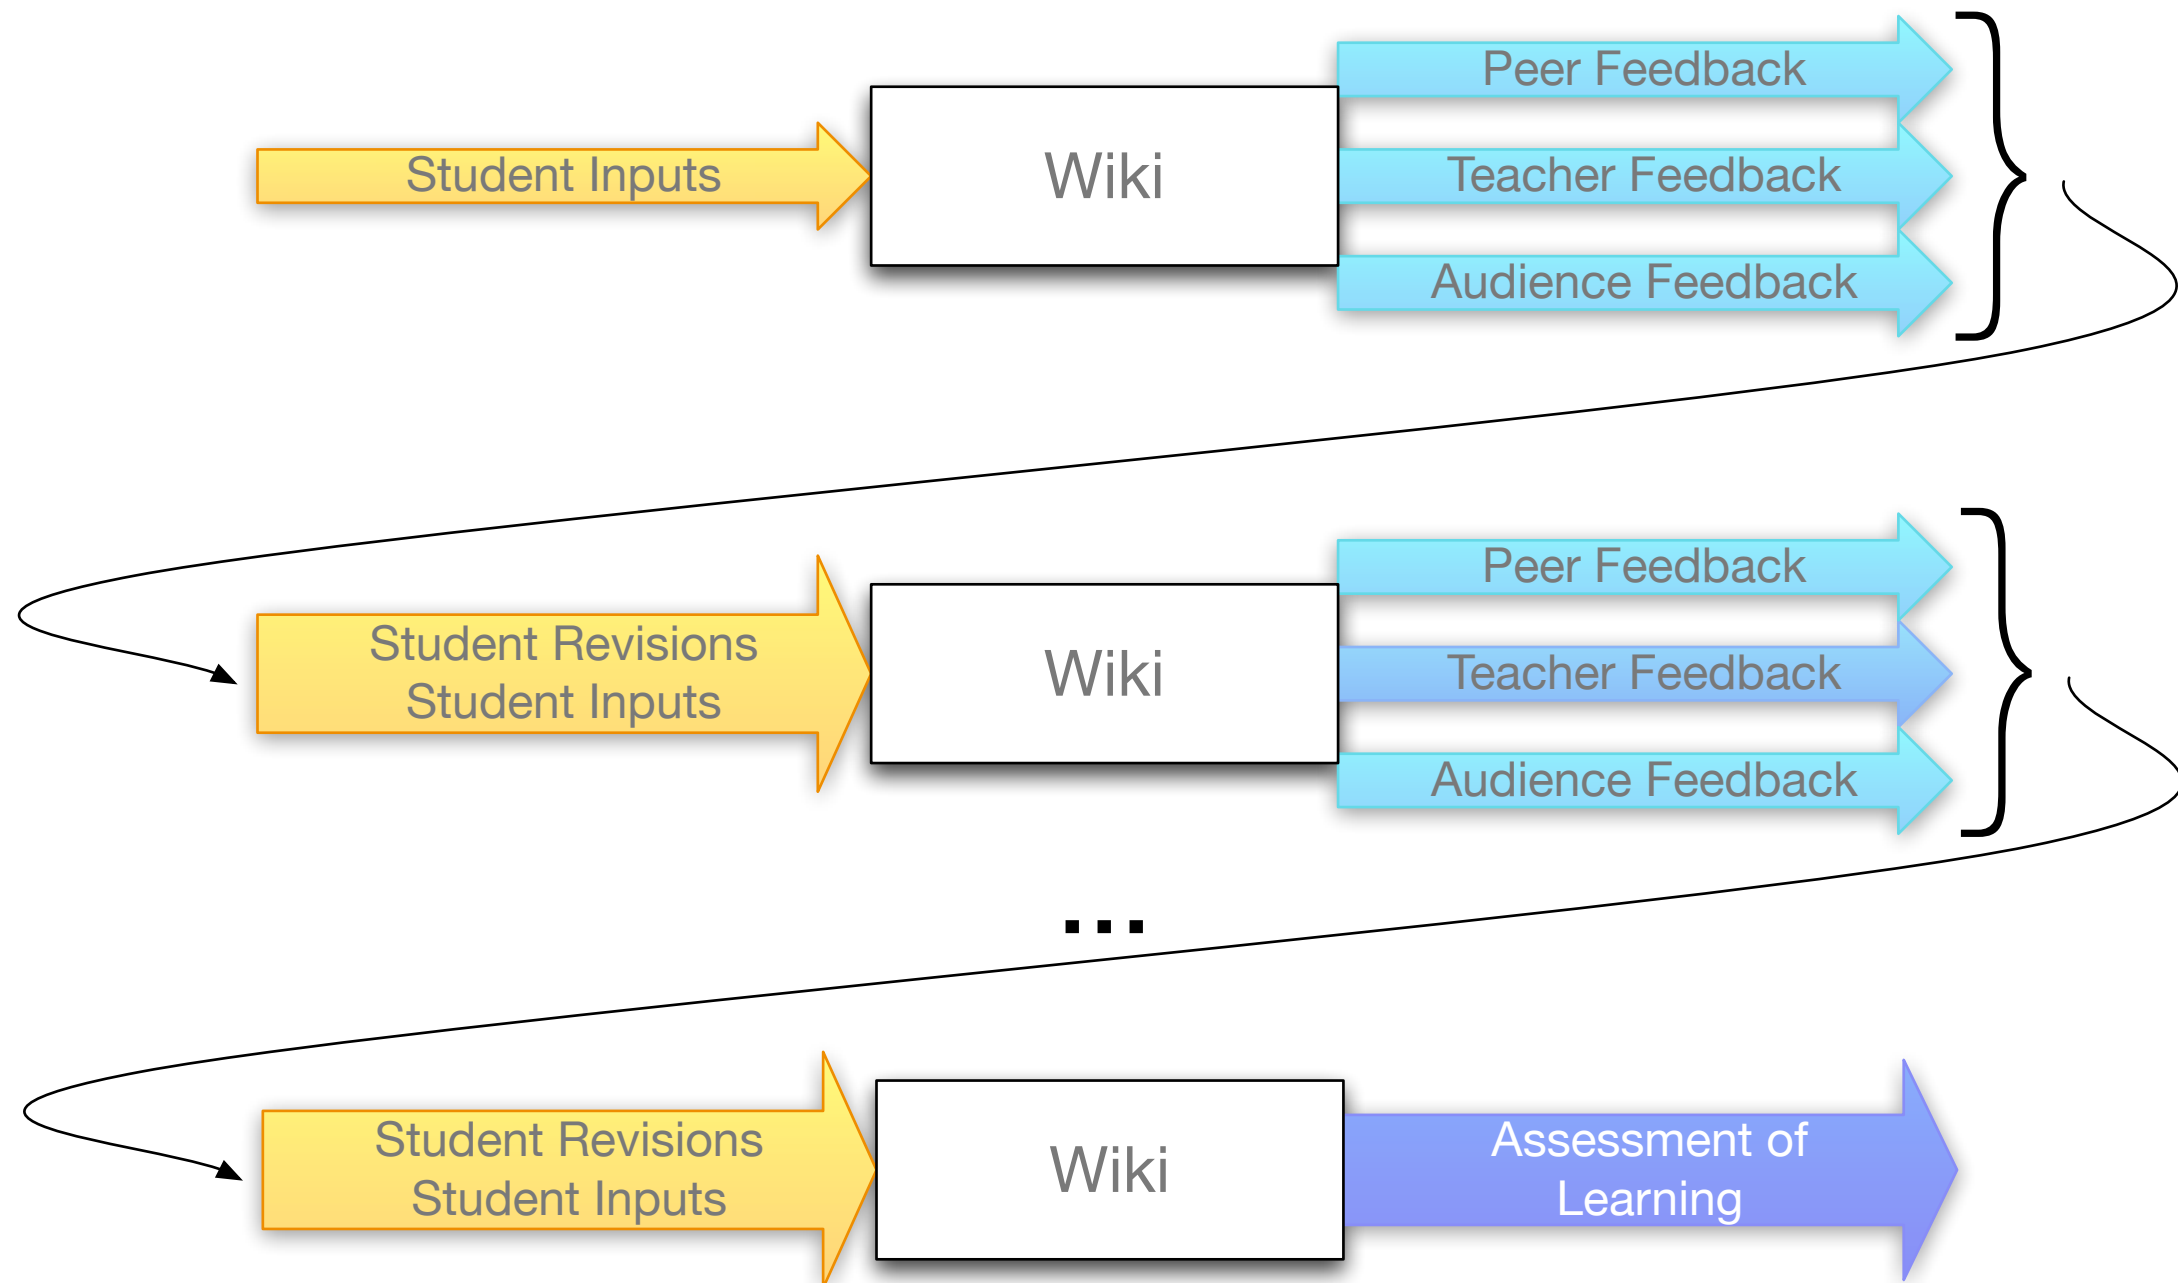

Modification: *ConcepTests*

(Mazur, 1997)

Redefinition: *Designing for Wiki Learning* (Beasley-Murray, 2008)

Epilogue: Expectations

Seymour Papert: Four Expectations

- **Expectation 1:** the scholastically unsuccessful group among the students will advance by several grade levels on standard achievement tests in mathematics and language. We shall, of course, confirm the significance of any such observation by comparison with a control group matched on a series of variables set up before the outset of the experiment.
- **Expectation 2:** observers will agree that the student in the experiment not only learned more than in a traditional class, but learned it in a more articulate, richer, more integrated way.
- **Expectation 3:** students will develop, or adapt concepts and metaphors derived from computers and use them not only as intellectual tools in the construction of models of such things as "number" and "theory" but also in elaborating models of their own cognitive processes. This will in turn have an impact on their styles of learning and problem-solving.
- **Expectation 4:** the use of computer metaphors by children will have effects beyond what is normally classed as "cognitive skill". We expect it will influence their language, imagery, games, social interactions, relationships, etc...
